

Summer Task for Mr Graves Geography

This is only half the task – as Mrs Nicol – Boyle will also be setting a similar task

I would like you to research and create a **factfile** about the Katrina hurricane that hit the USA in 2005

It should focus on the primary and secondary effects, with facts and figures on the number of people affected and costs.

It should also look at how the event was prepared for and what happened in the weeks and months after the event.

Best to group your ideas and findings into

Social

Economic

Environmental

You should have in mind the question

“To what extent was the catastrophe a natural one, rather than a human disaster?”

The factfile should be no more than 2 sides of A4 and ready on the first lesson in September.
